In conclusion, the data collected in this study support the hypothesis that...
Important and relevant in many different areas and not limited to certain
sectors. The data indicates that in the same year, no business awards were
awarded in the UK, Germany, and Japan. Similarly, in 2004, 2005, and 2006,
awards were given in the US, Canada, and Singapore. This indicates a trend
of increasing awareness and recognition of business excellence in these
countries.

Economic studies that examines across many different countries and sectors,
dissect form monetary compensation, the gap in measured total
departments, and find that the monetary reward is positively related
to economic growth and productivity. Rewards are a reflection of
monetary compensation, serving as incentives for employees to
increase production. Awards to employees in these studies are
usually monetary, and are given in recognition of their
accomplishments. The incentives of these awards are expected to
increase productivity and overall performance. However, the
impact of these awards on the productivity of employees is
mixed. While some studies find a positive relationship, others
find no significant effect. The effectiveness of these awards
depends on various factors, including the size of the award,
the nature of the performance measure, and the culture of the
organization.
